

Tips and Resources for Creating a Film with your Smartphone

Free Filmmaking Apps for Smartphones

- [Hyperlapse](#): Hyperlapse is a free camera app from the creators of Facebook and Instagram. It uses built-in image stabilisation which will give you great time-lapse videos without the need for tripods or other expensive equipment. Hyperlapse will instantly stabilize your video and smooth out bumps to create great cinematic videos.
- [Splice](#): Splice is a simple but powerful video editor made by the good folks at GoPro. Although GoPro released this app to edit video shot with the GoPro camera it will also edit video shot on your iPhone. It is easy to create professional looking videos with Splice and it has great editing tools to help you cut your video. You just tap on clips to trim, crop or cut them to size. You can also add fully customizable transitions like dissolves and fades to improve the look of your edits. You can add images and photos to Splice, which you can add zoom and move effects. Handy if you need to create more movement and excitement.
- [iMovie](#): the classic iOS video editing app. While it offers a pretty basic range of editing functions, the upside is that it's relatively accessible and easy to use.
- [Adobe Premiere Rush](#): On mobile, filmmakers can shoot, edit, and share their video content all in one device from anywhere. You can also create between your devices, including desktop, by opening your Rush files right in Premiere. The intuitive and very familiar multitrack timeline allows users to arrange video, audio, graphics, and photos by dragging and dropping. You can adjust audio, enhance color, add titles, transitions, voiceovers, and more.
